

MyGlucoHealth Meter

Smarter Diabetes Management for a Digital Lifestyle

MyGlucoHealth is an intelligent diabetes management platform providing comprehensive tools for patients, clinicians and caregivers to improve lives and lifestyles

MyGlucoHealth Wireless is the world's first integrated Bluetooth-enabled blood glucose meter. With the smallest blood sample size (0.3ul), automatic coding and results in just 3 seconds, the MyGlucoHealth Wireless meter is the most technically advanced diabetes care product on the market today.

MyGlucoHealth Wireless along with the MyGlucoHealth Network offers a comprehensive diabetes management platform that gives patients more direct control over their care, while providing enhanced communications with their clinician, family and caregivers.

MyGlucoHealth Wireless works in combination with a real-time online data collection network to upload and report patient blood glucose readings. Using the MyGlucoHealth Network at www.myglucohealth.net, (or regional sites throughout the world) patients can transmit, review and evaluate their daily reading while communicating those same readings automatically to their clinician or caregiver. This allows clinician to stay up-to-date on patients and intervene immediately if necessary.

The MyGlucoHealth Portal is an extensive communication and data management web site that provides an easy-to-use interface for automatically collecting test results from the meter. Stored results are wirelessly transmitted by mobile phone or PC to the Portal for posting. This is preformed automatically using Bluetooth technology or by connecting a USB cable directly to the meter. The direct upload process eliminates manual logging of rest results, improving accuracy, providing better access to critical data and removing the opportunity for mistakes or erroneous entries.

Make Better Lifestyle Choices

On the MyGlucoHealth Portal, readings are charted and interpreted in a number of ways to best analyze and evaluate blood glucose data. The Portal is designed to help users take "ownership" of their disease, so they can make more effective lifestyle choices.

MyGlucoHealth Wireless Meter

- World's first FDA-cleared Bluetooth blood glucose meter
- Smallest sample size: 0.3 microliters
- Fastest testing: 3 second results
- Auto-coding
- Alternate site testing
- Plasma-calibrated
- Add blood to rest strip for up to one minute
- Easy-to-read display, large clear buttons
- Price of meter and strips comparable to non-connected meters
- Test Range – 10-600 mg/dL
- Power Source – 3 V (2 standard AAA alkaline batteries)
- Battery Life – 2,000 tests

The MyGlucoHealth Network

- An integrated Connected Care solution for managing communications between patients and clinicians to effectively control and treat diabetes.
- Test results are wirelessly transmitted to the MyGlucoHealth Portal using Bluetooth technology.
- Automated online system for alerts, testing and medication reminders.
- Personal online healthcare logs for diet, medication, exercise, cholesterol and blood pressure.
